Department
DeptID**(PK)**, DeptName, DeptAddress

First Normal Form
This table is in first normal form as it has no set valued attributes.

Second Normal Form
Since the primary key in Department is made up of only a singular attribute, the Department is in 2NF.

Third Normal Form
Both non-trivial FDs, DeptID->DeptName and DeptID->DeptAddress, satisfy the condition (a) where X is a superkey of R. Thus, the Department table is in 3NF.
